Keeper Technology® LLC Creates New Partnership with Violin® Systems LLC

Violin Systems and Keeper Technology Together will Provide Customers with Market-leading High-performance Data Storage Solutions.

ASHBURN, Va. – On February 9, 2018 Keeper Technology LLC and Violin® Systems LLC publicly announced they formed a strategic partnership to provide Keeper Technology customers with new Violin Flash Storage Platform™ for best-of-breed systems to include the full power and convenience of flash memory storage.

Based in “Data Center Alley,” where 70 percent of the world’s Internet traffic flows, Keeper Technology provides world-class integrated data storage solutions for government and private sector clients. Their customers store and protect dozens of petabytes and billions of files using Keeper Technology’s best-of-breed data storage systems.

As part of Keeper Technology’s commitment to provide the best solutions available to its customers, Violin Systems LLC was selected because of their extreme performance all-flash storage solutions to achieve the high throughput and lower latency they require.

“Government and commercial entities alike demand cost-effective, dynamic, future-proof solutions to solve their pressing data management problems,” said David Donald, Founder and President of Keeper Technology. “After vetting several different products on the market, we partnered with Violin Systems LLC because they offer the best solution for our customers. Violin harnesses the full power of flash memory, and we are well poised to satisfy the capacity and performance storage needs that our customers demand in order to take control of their storage infrastructures.”

The Violin Systems Platform provides the ability to support growth, improve efficiency and manageability, and deliver consistent and predictable service levels without breaking the IT budget. Enterprises and government agencies can transition from legacy storage solutions to enterprise-class all-flash storage to achieve favorable CAPEX and OPEX scenarios with the Violin Flash Storage Platform.

“If, as the saying goes, you are known by the company that you keep, it is imperative to partner with only the best in the business in order to be thought of in the same regard,” said Ebrahim Abbasi, Violin ® Systems LLC CEO and President. “Having a hands-on, engineering-focused organization like Keeper Technology, which only implements the best solutions for its customers, as a partner is excellent validation that our product offerings provide a full set of capabilities required to transform today’s storage infrastructures and data centers. We are pleased that the Violin ® Systems Flash Storage Platform is considered the performance storage of choice for Keeper Technology’s governmental and private clientele.”
