

Capabilities Statement

Building Better Big Data Solutions.

Keeper Technology, LLC has provided integrated technology data storage solutions to government and private sector clients since 2005. Our customers rely on our solutions to access, manage, protect and store dozens of petabytes and billions of files.

Our Core Competencies:

Keeper Technology solutions address today's most challenging data storage and processing issues for industry and the intelligence community.

- Data Storage System Architecture, Deployment, and Support
- Clustered/Shared File Systems Design
- Tiered Storage Architectures (ILM)
- Workflow Management
- Performance Tuning and Optimization
- Customized Cloud Storage Solutions

Our Solutions:

Keeper Technology focuses on enterprise data management on a scale of hundreds of terabytes into the petabytes. Our solutions for today's and tomorrow's big data environments include:

- **Tailored Storage Solutions:** We harness the best of open source technology with Keeper ingenuity to enable scalable, internal, private, and hybrid-cloud storage infrastructures.
- **Information Protection:** Integrated data protection and integrity utilizing features like continuous backup, encryption at rest, checksums, snapshots and data replication are at the heart of our solutions.
- **Data Management:** Rapid data ingestion and indexing plus policy-based data management organizes and protects your valuable information assets thus allowing high speed data collaboration and cost effective content retention.
- **Disk Storage:** Not all spinning disks are created equal. We provide unique disk offerings that can provide substantial value to our customers' demanding environments.
- **Flash Storage:** If speed is what you need, we supply flash memory arrays: 100% solid-state storage arrays built from the ground up to harness the full power of flash memory.
- **Support:** Finally, we provide a high level of customer support for all our solutions. That includes on-site support response with an emphasis on quickly restoring operational status – no matter what the root cause.

Capabilities Statement

Differentiators:

- **Deep Industry Experience:** Our team has designed, developed, and maintained some of the most demanding, sophisticated storage environments in the world.
- **Strategic Relationships:** Our highly selective line-card enables us to focus on and develop key partnerships with vendors who offer best of breed, disruptive technologies. We are often recognized as a top partner for our strategic vendors.
- **Revolutionary Products:** Keeper's kSAFE storage appliance solves the hard problems of managing billions of files and petabytes of data through a unique combination of open-source technology and Keeper intellectual property, all tightly integrated with hand picked hardware for a future-proof solution.
- **Evolutionary Mindset:** Keeper's technical team continuously develops and integrates solutions with the future in mind with the purpose of offering a seamless and cohesive mission centric customer experience.
- **Leadership with Experience:** Privately owned and operated, Keeper Technology is fully supported by a dedicated executive and engineering team touting countless years of vast storage industry knowledge and experience.
- **Active SCI Clearances:** Keeper Technology personnel maintain active SCI security clearances to support our government intelligence community customers.
- **Intelligence Community Expertise:** Since the late 1980's, Keeper Technology engineers showcase deep roots within the broader intelligence community supporting critical mission objectives by architecting very large data repositories.
