**keepertechnology**  
AUTHORIZED RESELLER

# Mission

- Transform Enterprise file data into a global asset
- Eliminate data gravity
- Enable greater utilization of data to drive business outcomes

# Hammerspace Use Cases

Hybrid  
Cloud NAS

Distributed  
Workforce

Burst For  
Compute

Multi-Datcenter NAS

Multi-Cloud NAS

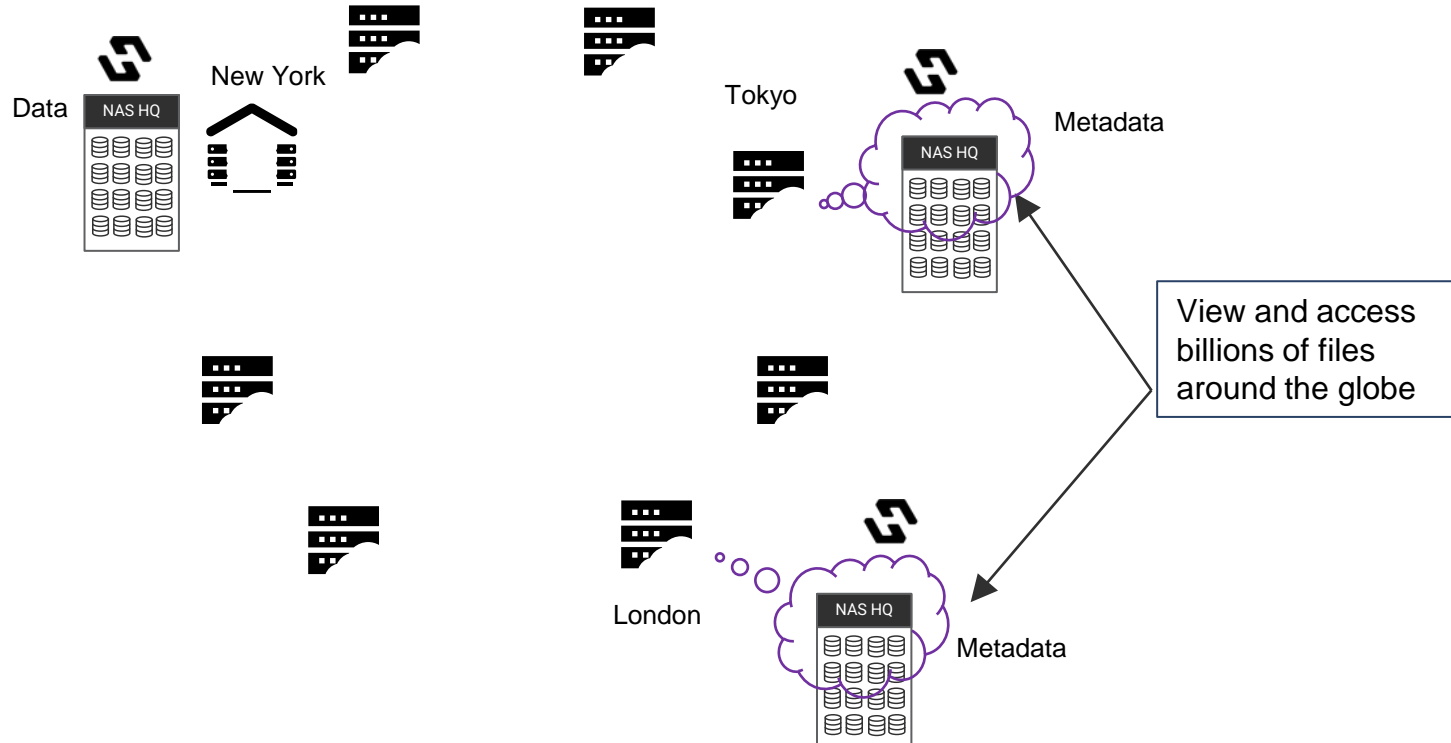

Single Datacenter NAS

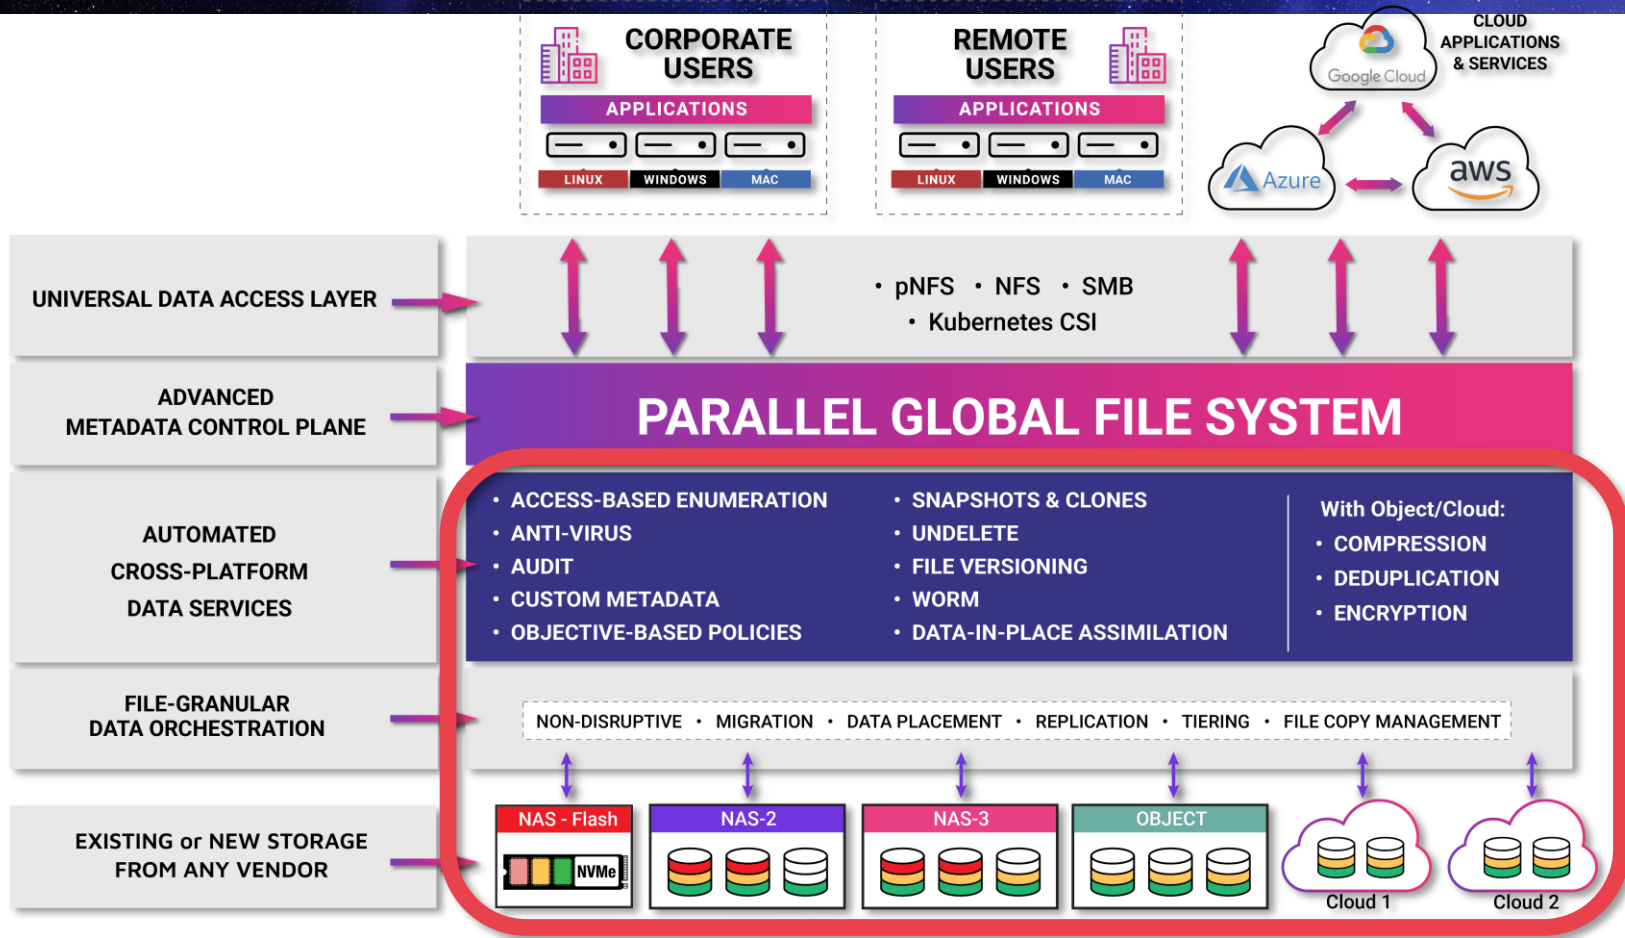

# True Global File System

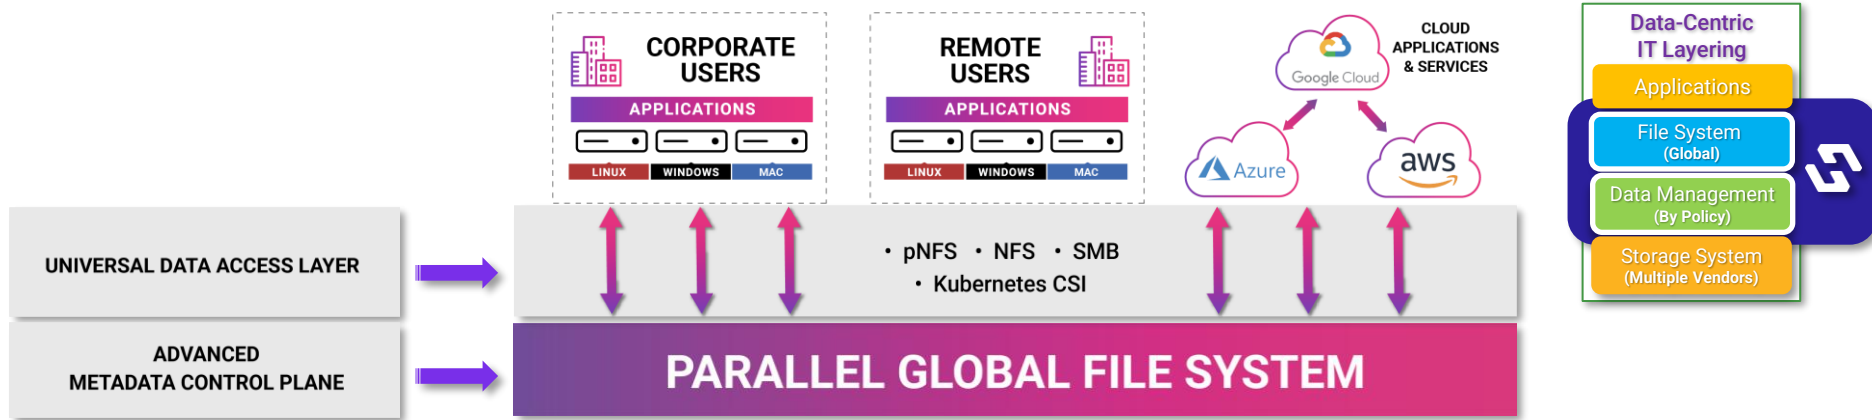

- File-granular data services
- Policy-driven
- On-demand

# Global Data Services with File-Granular Orchestration

# Parallel Global File System Spans all Storage & Sites

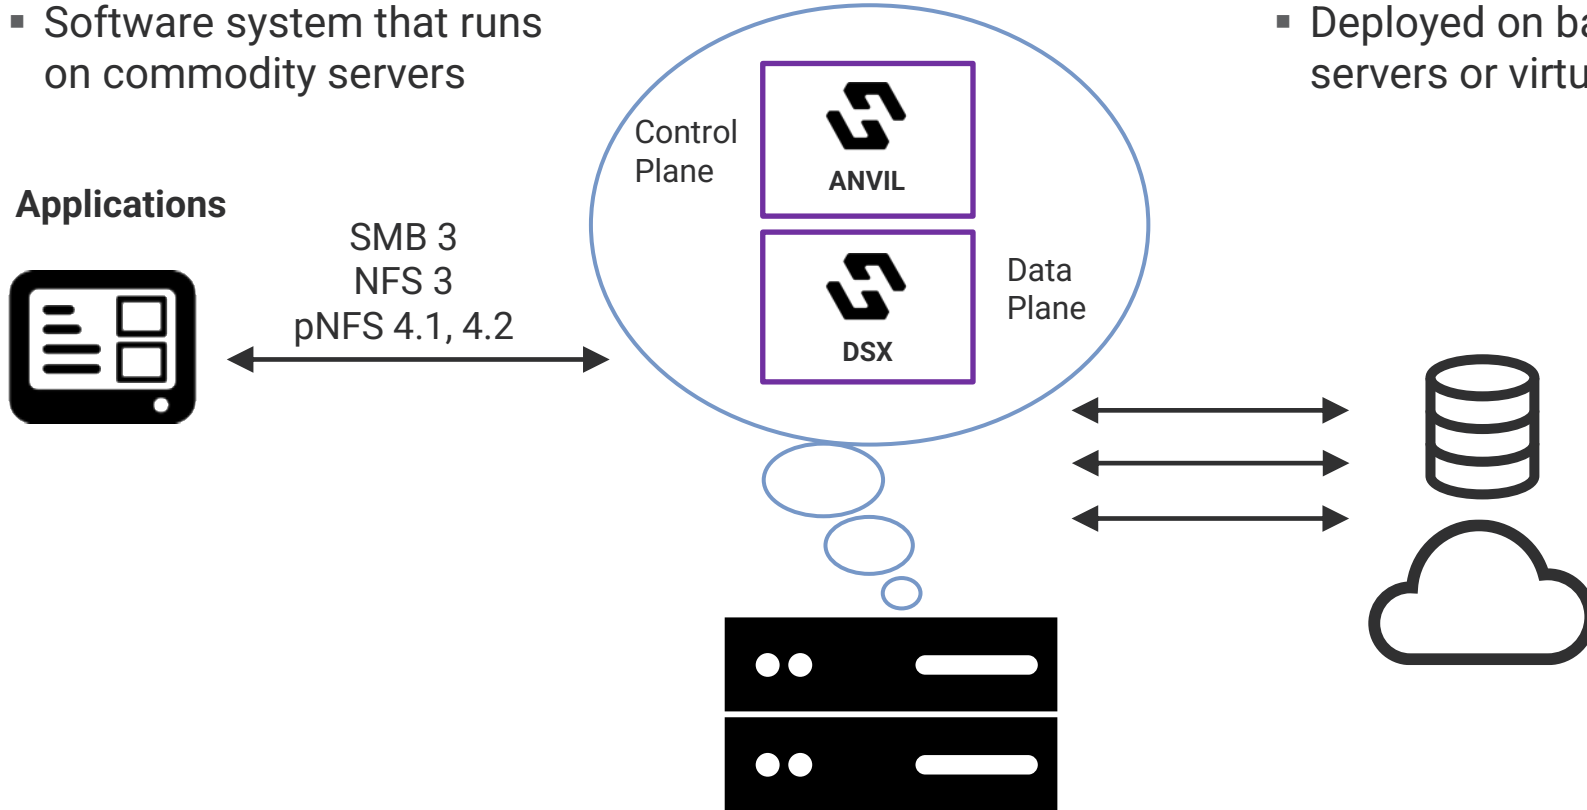

Supports Any Storage Vendor and Cloud

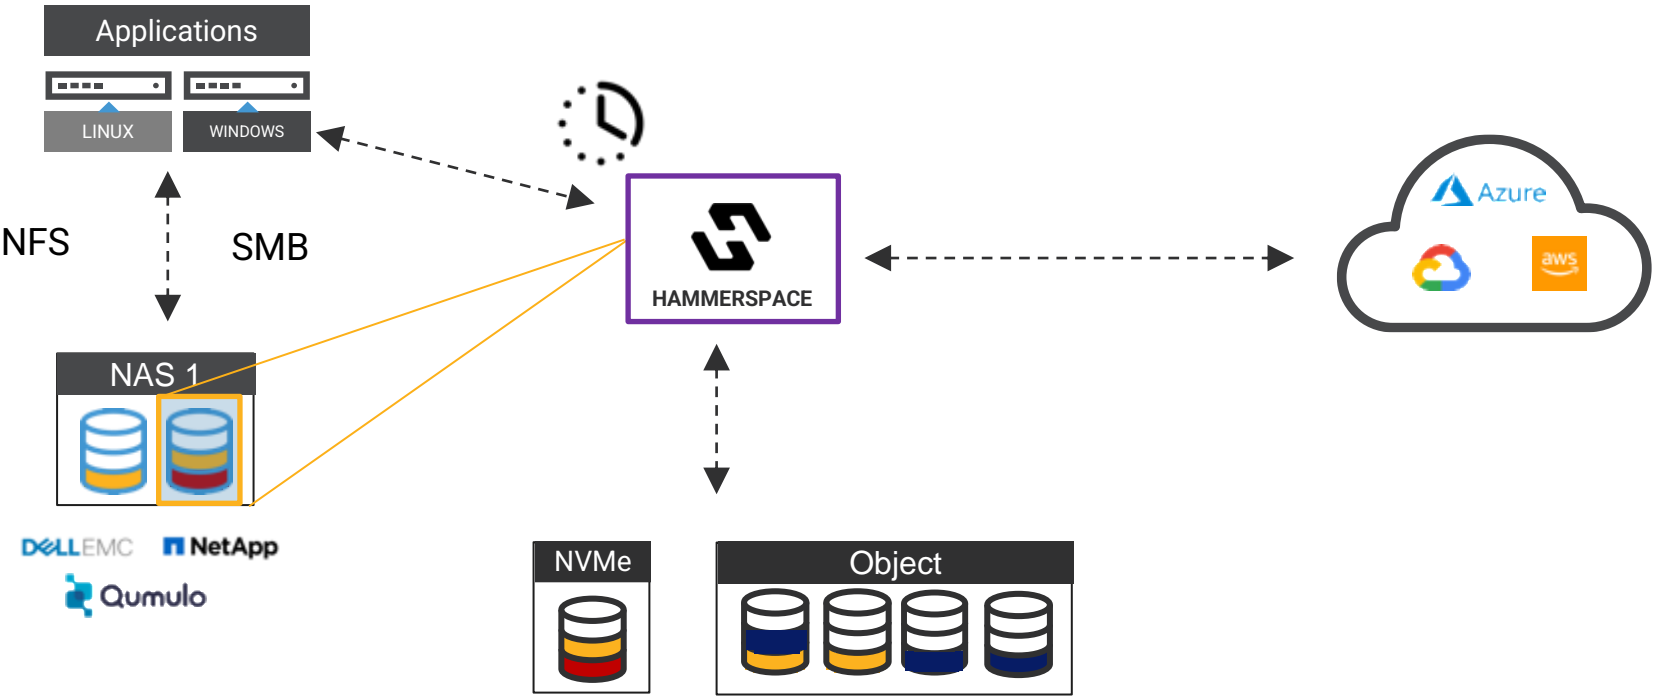

# Software-Defined Data Platform

- Software system that runs on commodity servers

- Deployed on bare metal servers or virtual machines

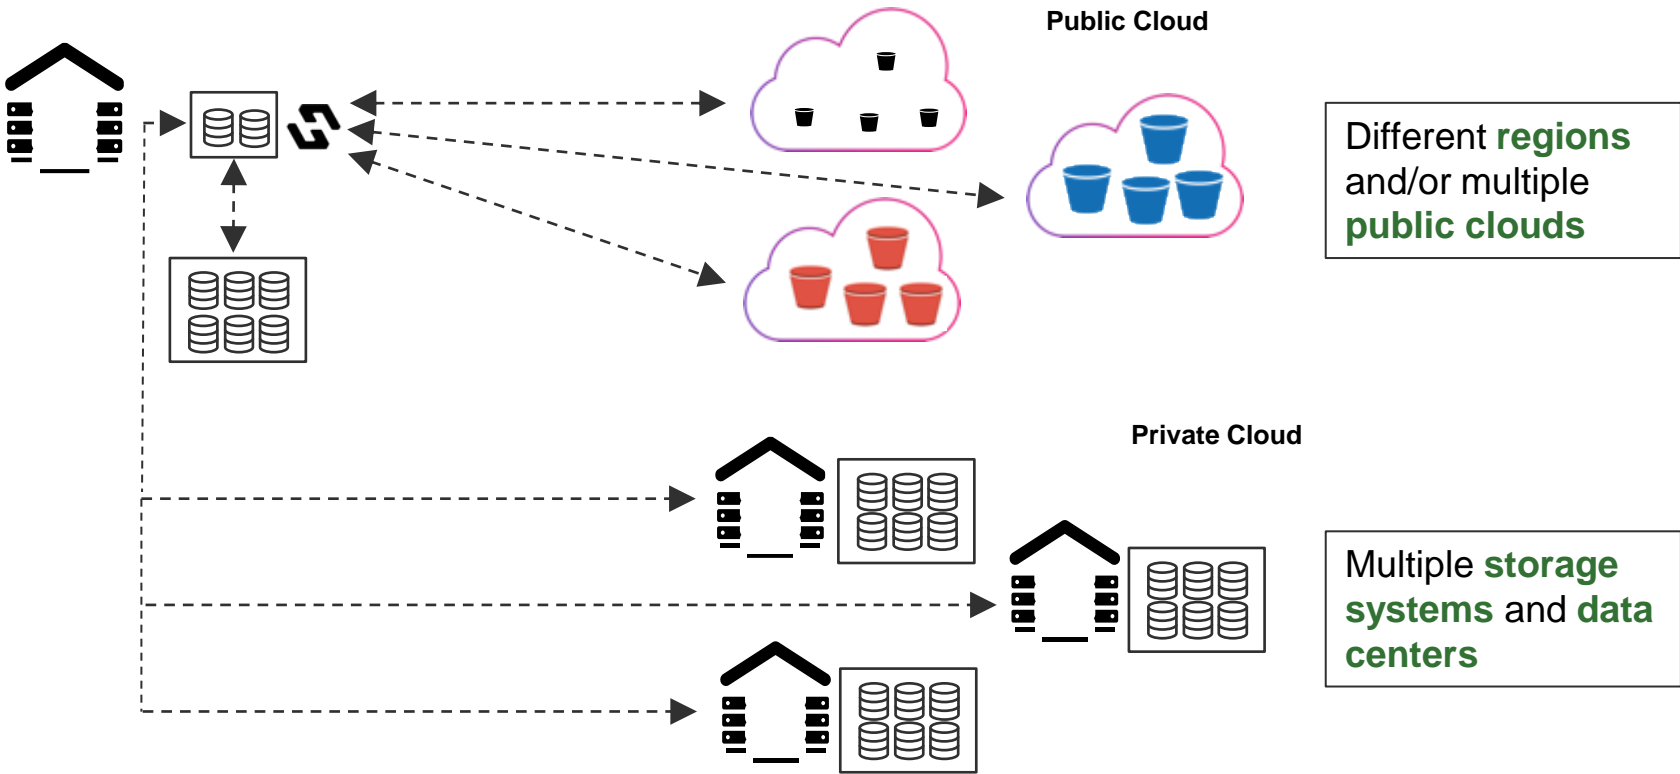

# Data-in-Place Assimilation

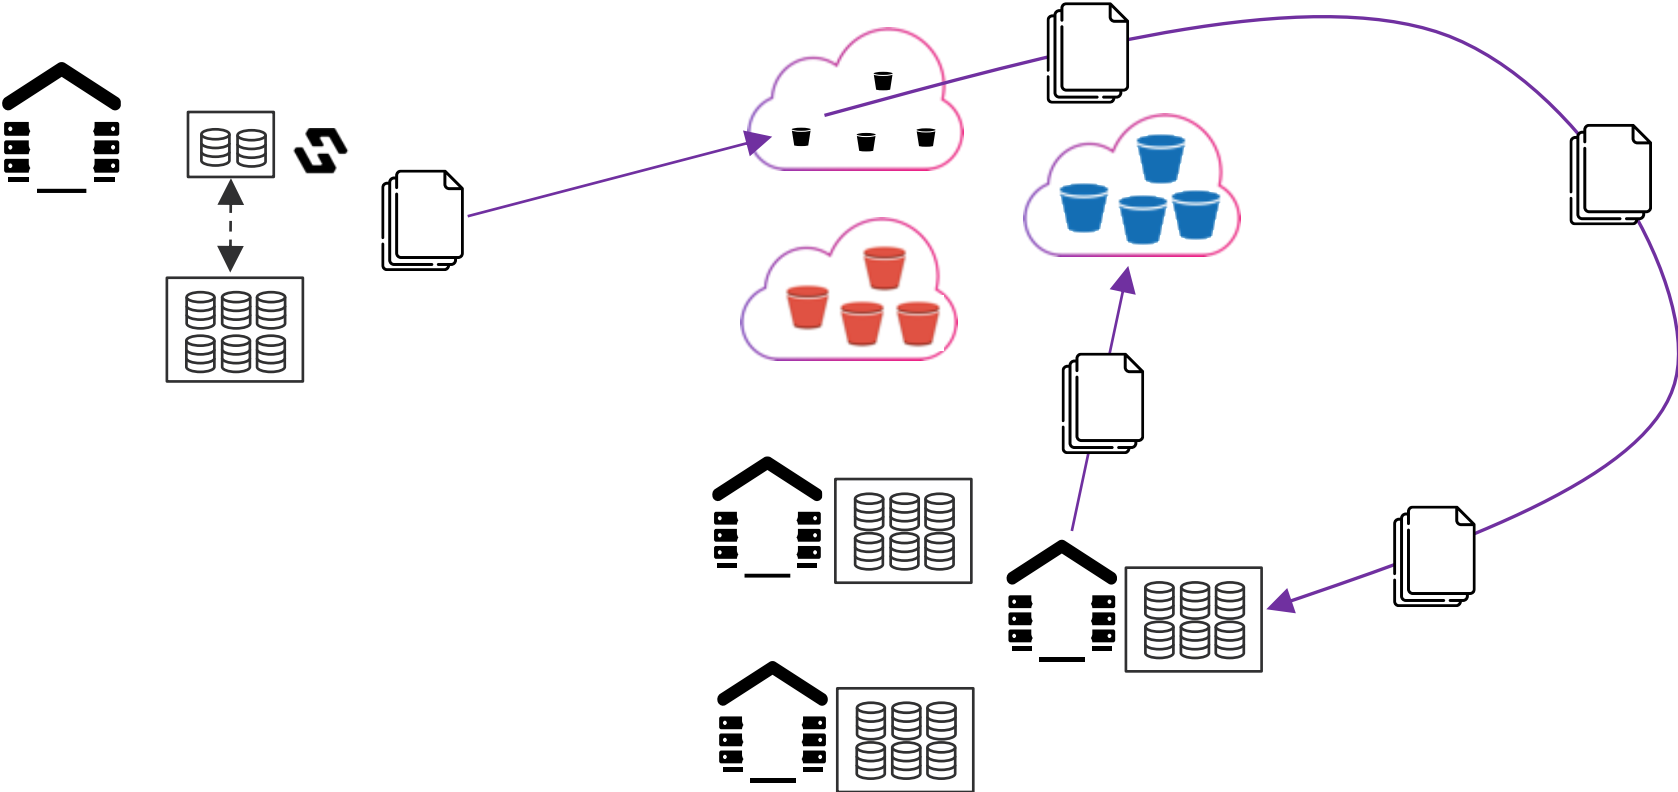

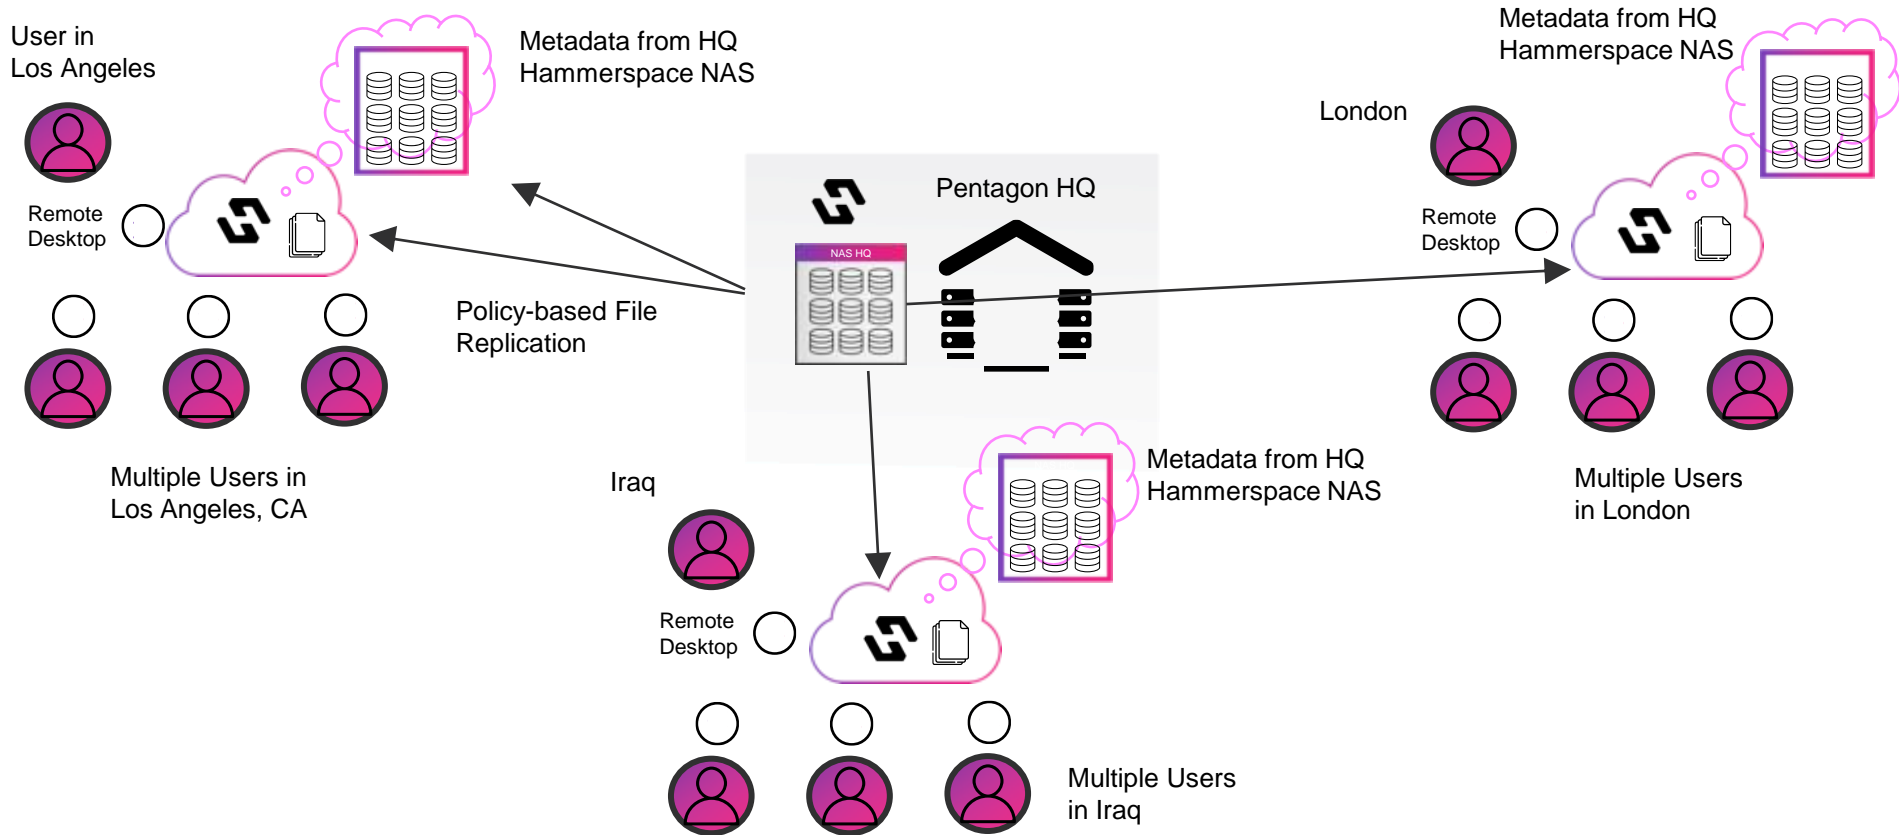

# Hybrid Cloud NAS

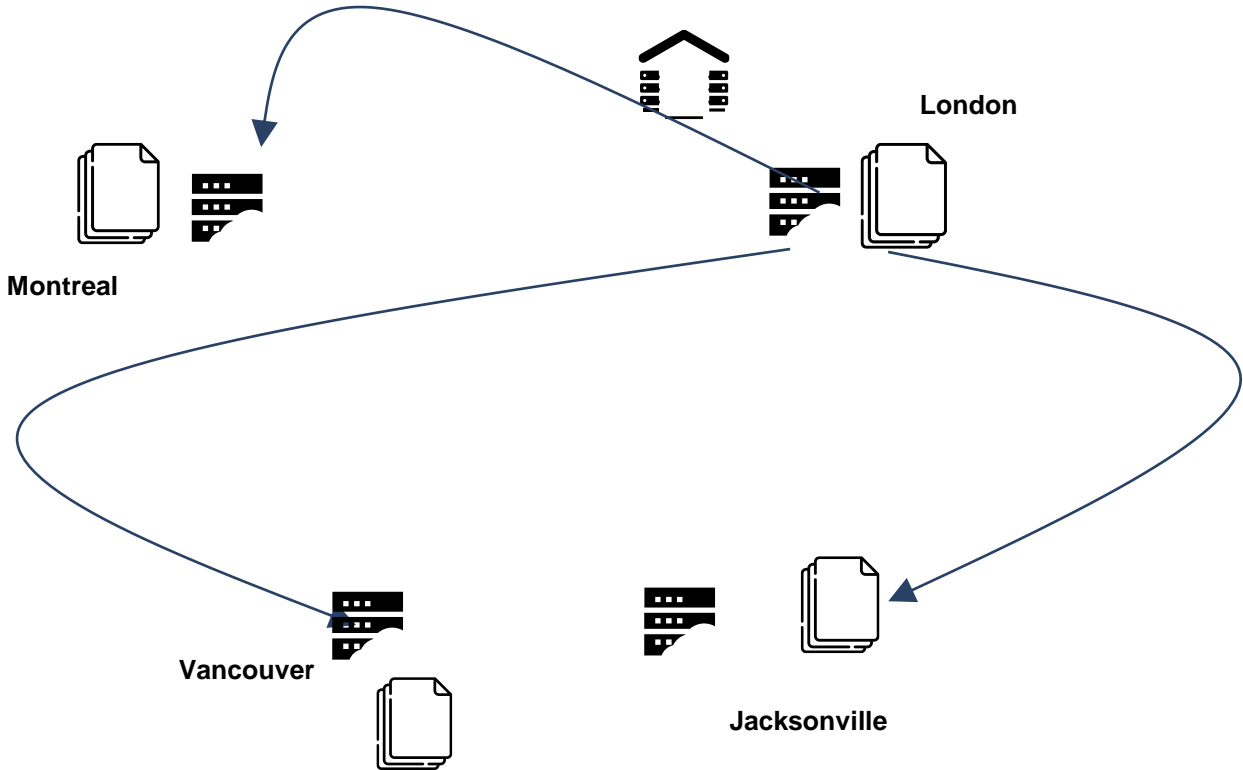

# Automated Data Orchestration

# Distributed Workforce

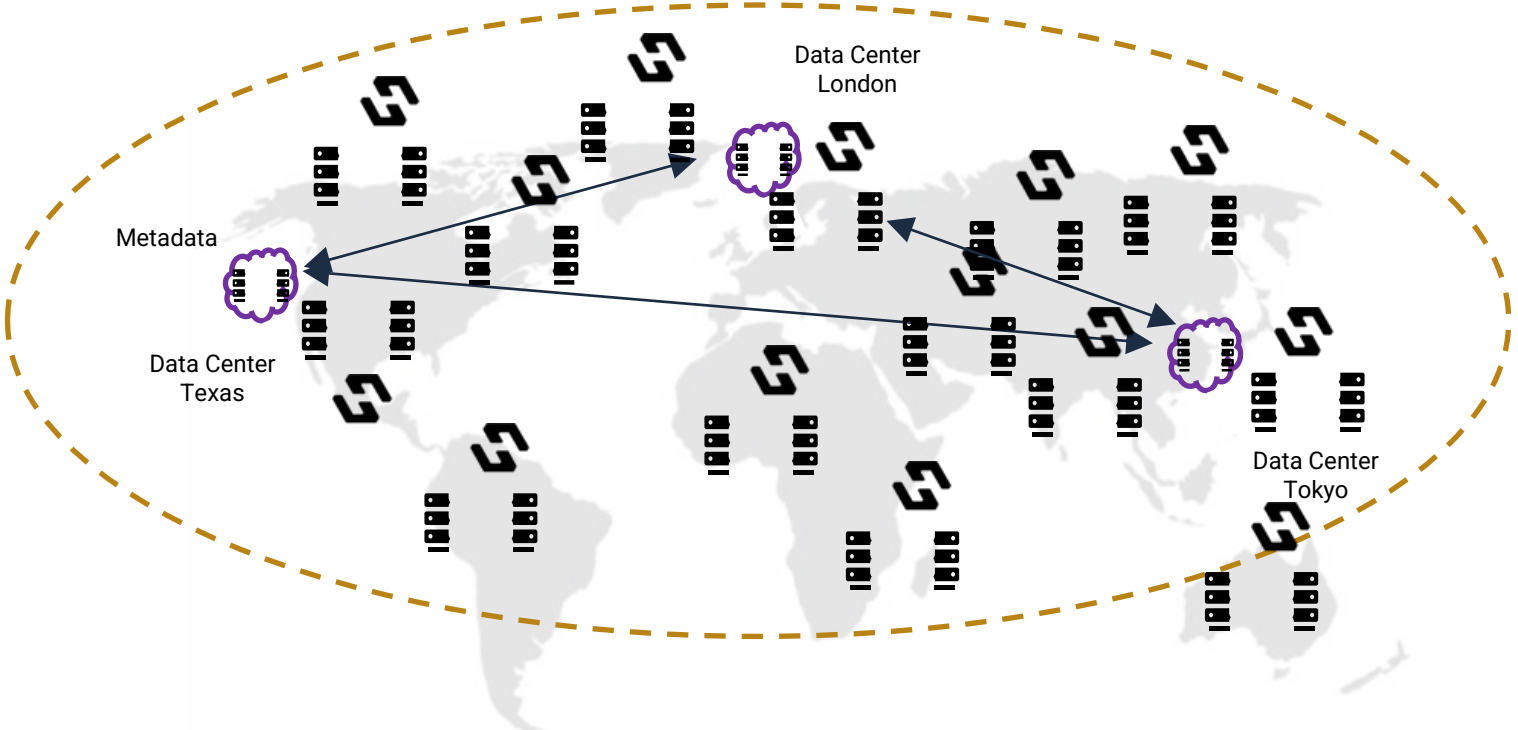

# Burst-for-Compute

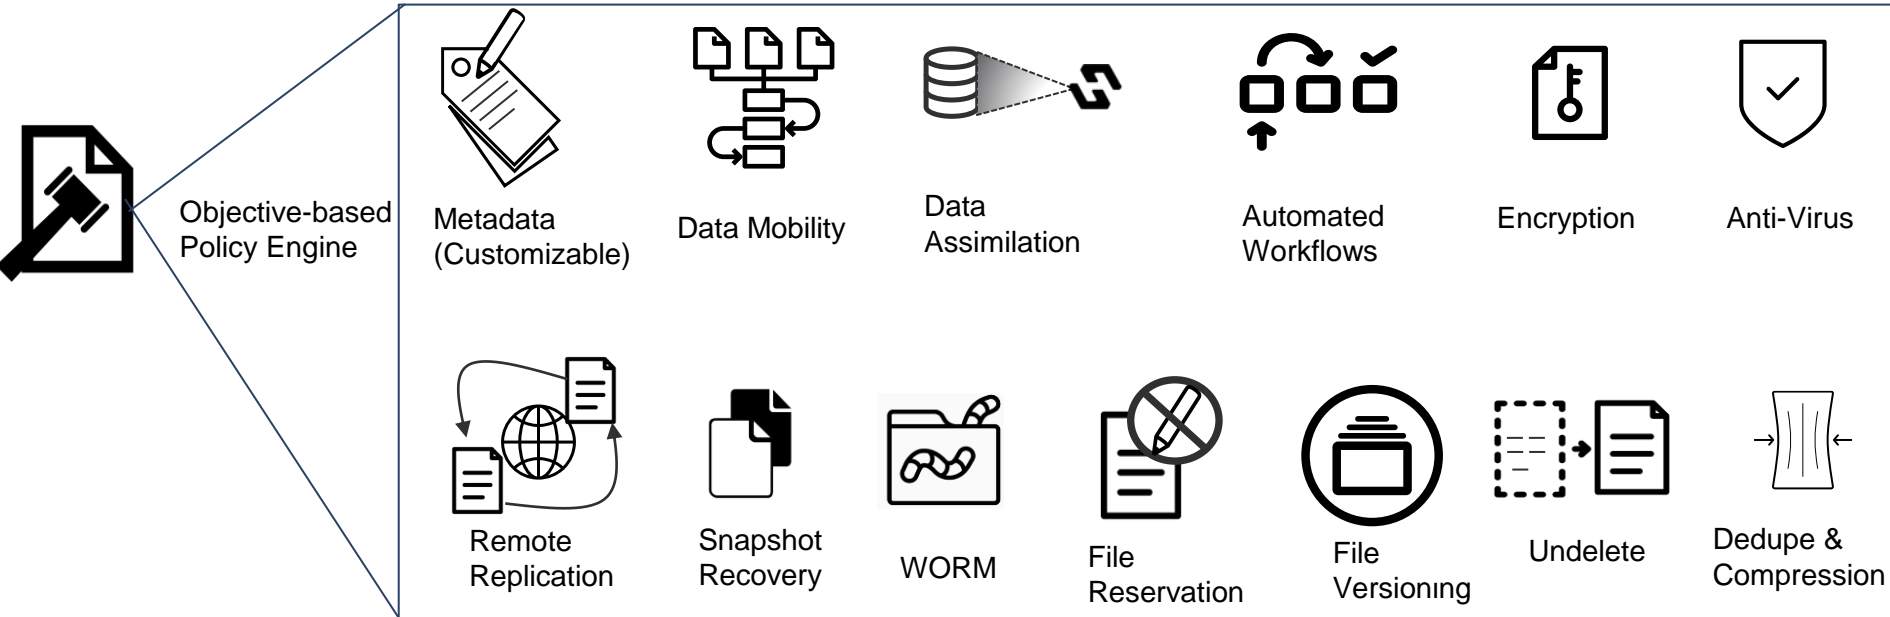

# Multi-Data Center NAS

## Single Logical System

# Feature-Rich Data Services and Management

## File Granular Data Services

# Hammerspace Ecosystem Integrations

# Why Customers Choose Hammerspace

- Visibility and access to billions of files without copying data everywhere
- Instances and not copies
- Automated workflows
- Elimination of data gravity
- Objective-based policies
- File-granular data services
- Customizable meta data
- Application integration
- **Infrastructure independent for both on-premises and public cloud**

# Hammerspace Global Data Environment

## True Global File System

- A single logical system that spans multiple remote sites
- Access billions of files without copying data everywhere

## Objective-based Policies

- Create policies to automate the management of your data
- Manage via any metadata or custom metadata attribute

## Data Orchestration

- Eliminate data gravity with the ability to move data to any storage infrastructure live and transparently

## File Granular Data Services

- Replicate, tier, protect and recover at the file-level

## Ecosystem Integration

- Integrate with 3<sup>rd</sup>-party applications, technologies and platforms
